## ABOUT NEXUS

### What can Nexus do?

#### Multiroom video

- Watch digital TV in any room
- Satellite and cable in any room
- DVDs, video play around the house.
- Integrate with a home cinema system so that all your AV equipment is viewed and heard through it.
- TV recording (PVR) function at any TV.
- Play Audio-Video from a central server.
- Use a PC at any TV \*\*with a video card and IR keyboard.

#### Multiroom audio

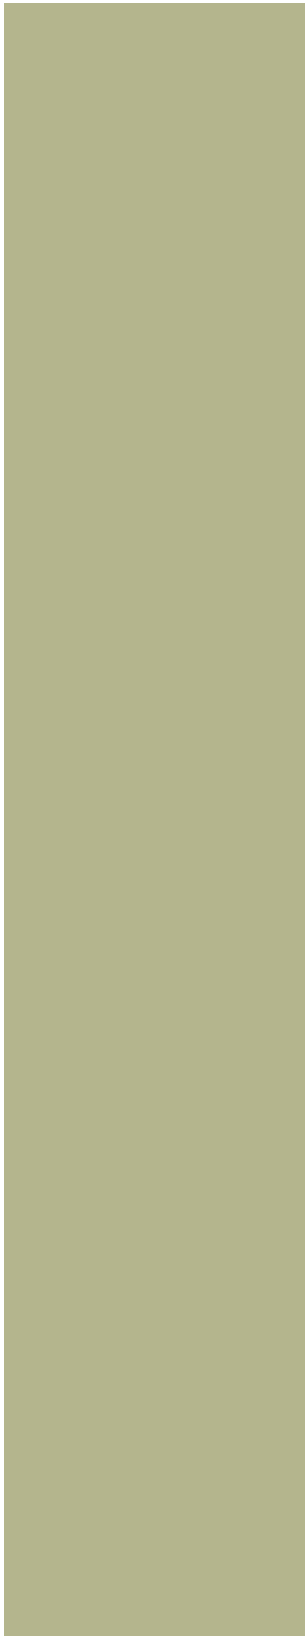

Nexus touchscreen

- All personal music collections can play at any speakers.
- Play music around your house from a PC, jukebox or hard drive server.
- Listen to all TV, radio, CDs, MP3s, DVDs, Videos through your best speakers in the living room.
- Everyone can listen to their own music in any room, rather than the confines of their own room.
- Play radio, digital radio or internet radio around the house.
- Connect portable music players.
- All of this in the Kitchen, bathroom, bedroom, study...

#### Security

- View baby monitors at any TV.
- View front door or security cameras.

## Telephony and data

- Plus you can use the same infrastructure for telephony, networking computers, sharing the internet.

## The NEXUS vision:

Multiroom audio and video that is:

### High quality

The NEXUS uses state of the art line drivers and receivers to accept and distribute high quality audio and video signals using shielded Category5 cable. This allows you to connect high quality audio and video equipment without degradation of the composite video or line level audio signal.

### Simple to design

For a basic infrastructure one double RJ45 socket each room and a quad in the study. These are "star wired" to the central hub.

For a complete infrastructure double this by placing outlets in each corner of every room. This will give you access to more areas of your house and give you more flexibility when arranging the furniture layout.

### Easy to install.

Category 5 cabling is quick and easy to install. The Nexus unit is a plug and play device and supplied with everything you require to connect all of your AV equipment to a CAT5 cabling infrastructure.

### Easy to use

Simply point the Nexus remote at a TV or speakers and choose what you want to watch. To control any source, use its own remote in any room.

powered by **funkydunk**

## **Futureproof**

Category 5 cable is the digital standard with 100Mb/s capacity. This provides you with an infrastructure that is futureproof to developing technologies.

## **Versatile to your needs**

The Nexus gives every room access to all your equipment so that you can organise your music and video options to suit how you live.

## **Open standard.**

Nexus uses standard audio, video and IR signals so that you can connect almost any AV equipment to it, old and new, budget or high quality.

## **Ergonomic**

Equipment cupboard to hide away unsightly AV equipment. Have flat screens in each room with no other equipment is neat and saves space. No wiring mess behind TV. Flood-wiring CAT5 allows redesign of room layout without needing to worry about position of TV.

## **To suit your budget and requirements**

Nexus systems are modular so that you can choose the system to suit your needs and budget.
